Brief disposition: Sash window repairs (P-014), blocked at B2

Nov 13, 2026 · @Daryl

Blocked: Return to B2. Evidence and Claims Dossier Builder. C02 is marked "Client confirmation required". The symptom and photo checklist is what makes this page different, and it depends entirely on C02. The pack supplies no other approved contribution.

This pack is identical to the earlier T02 file (the two files were compared directly). The run started with the slash command gave the same disposition as the plain request.

1. Brief status and writer route

- **Status:** Blocked: Return to B2. Evidence and Claims Dossier Builder
- **Writer route:** None selected. W1. Local Service Content Writer fits the page job, but there's no handoff until the next pass confirms it
- **Brief revision:** None issued. This is a blocked disposition record
- **Page ID and action:** P-014, Improve (B1-014)
- **Dossier:** B2-014 is labelled "Ready for B3", with an evidence cut-off of 30 October 2026. Its own C02 entry doesn't support that label for this page, because the page's main contribution rests on an unconfirmed claim
- **Page opportunity approval:** Given by the editorial owner, per B1-014. The name and date weren't supplied
- Human approval: Awaiting approval
- **Specialist review:** The service owner needs to confirm the intake steps and the photo safety limits in C02. Their name wasn't supplied, and neither item is confirmed yet
- **Failed gate:** Proof for the differentiator. The claim rules exclude anything marked "Client confirmation required", and that now covers C02. The pack says the checklist is essential to what makes the page different and gives no alternative. Without C02 there's also no approved statement of the assessment limitation, which A4-014 assigns to this page
- **Why B2, not B1:** The URL, action, page ownership, reader task and voice are all confirmed. Only the evidence is missing

What B2 needs to supply:

Item	What's needed
C02 intake steps	The service owner confirms the intake checklist (affected window, observed symptom, indoor photos), with a source locator and date
C02 photo safety limits	The service owner confirms exactly when customers can take photos safely, written as an explicit condition. This is safety material, so record who confirmed it and their role
Assessment limitation	An approved statement of what photos or an initial assessment can and can't establish. A4-014 assigns this topic to the page, and no current claim covers it
Alternative contribution, if C02 can't be confirmed	Approved evidence for a different way to make the page useful. If there isn't one, the page's reason to exist goes back to B1 (that's the next step after this return, not this return)
OI-1	Whether S01 rows 2 and 3 cover broken sash cords as well as worn ones. A3-014 lists "broken sash cord" as a separate symptom
Re-issued dossier	B2-014 issued again for the same URL, with the new evidence cut-off

2. Page identity and boundary

These fields are confirmed and kept for the next pass.

- **URL:** `https://joinery.example/services/sash-window-repairs/`. It stays the existing URL: no new URL, redirect or merge
- **Role and page type:** Local service page for timber sash window repair
- **Market and language:** Bristol, UK English
- **Page job:** Help homeowners decide whether to request a repair assessment for a timber sash window
- **Approved action:** Improve

- **Owned here:** Sticking sashes and worn sash cords on timber sash windows, what to include in a repair enquiry, the assessment limitation, and the existing photo checklist
- **Mentioned briefly and linked elsewhere:** Replacement, linked to `/services/sash-window-replacement/`
- **Excluded:** Pricing, emergency availability and general window installation
- **Nearest URL:** The replacement page, which owns the replacement options
- **What to keep:** The existing photo checklist stays in scope under A4-014. Its content can't be planned until C02 is confirmed
- **Note on the live page (my recommendation, not in the pack):** The live page already has a photo checklist, and its safety limits are unconfirmed. Its wording wasn't supplied. The editorial owner may want to check it now rather than wait for the next pass

3. Reader, intent and success outcome

- **Confirmed (B1-014, A3-014):** The reader is a homeowner in Bristol whose timber sash window sticks or has a worn cord. They want to know whether the company assesses the problem and what information to provide. Their decision is whether to request a repair assessment, and the next step is the contact form (C03). A reader who's thinking about replacement gets sent to the replacement page
- **Deferred:** The sign of success. "What information to provide" can only be defined once the intake steps are confirmed

4. Content promise and differentiation plan

- **Baseline:** Partly known. C01 supports the service scope and C03 supports the enquiry route. What goes in the enquiry, and the assessment limitation, have no approved support
- **Common failure:** Unavailable, because no SERP or market observations were supplied
- **Primary differentiator:** Blocked. The proposed symptom and photo checklist rests entirely on C02
- **Supporting asset:** None. There's no approved customer imagery
- **Practical consequence and content promise:** Deferred

5. Evidence and claims controls

These claims can be used on the next pass as they are:

Claim	Status	Source and locator	Approved meaning	Conditions
C01	Verified for use	S01, approved service scope, rows 2 and 3	The company assesses sticking timber sashes and worn sash cords in Bristol	Timber sash windows only, Bristol only
C03	Verified for use	S03, approved contact and service route register, rows 1 and 2	The contact form takes a text description for a repair assessment enquiry. Photos are requested separately if useful. The replacement page is the approved alternative route	The form takes text only

Do not use:

- **C02** (Client confirmation required, S02 fields 1 to 3): the proposed intake checklist and the indoor photo steps, including the safety limits. None of it can go into a brief or a draft, in whole or in part
- **C04** (Unsupported, S04 line 1): same-day work and a fixed repair price
- **C05** (Client confirmation required, S04 line 2): claimed first-hand testing and savings
- **Unresolved:** The assessment limitation, which no claim covers, and whether broken sash cords count as an assessed service (OI-1)

6. Section blueprint

Deferred until C02 is confirmed or an approved alternative contribution is supplied.

7. Original-asset and visual plan

Deferred. The planned text checklist depends on C02, and there's no approved customer imagery.

8. Query, entity and terminology rules

These are confirmed and kept for the next pass.

- **Primary family:** Timber sash window repair in Bristol
- **Variants:** "sticking sash" and "worn sash cord". "Broken sash cord" is held until OI-1 is resolved
- **Vocabulary:** Use "assessment" where diagnosis is still open (A2-014)
- **Exclusions:** Don't target replacement, pricing, emergency or installation terms

9. Internal-link and CTA requirements

- **Confirmed destinations:** `/contact/` for a repair assessment enquiry (a text description, with photos requested separately), and `/services/sash-window-replacement/` as the brief route for replacement
- **CTA concept:** Request a repair assessment
- **Placement:** Deferred until the blueprint exists

10. Voice and natural-writing instructions

These are confirmed and kept for the next pass: UK English, third person or neutral instructions, and no first-person claims, fixed quotes, urgency, promises or jargon. Use "assessment" wherever diagnosis is still open, and no em dashes.

11. Production requirements and acceptance tests

Deferred. On the next pass, B3 rebuilds the blueprint and acceptance tests from the re-issued dossier. That brief revision then needs approval from an authorised person, with a date, and the dossier must record the service owner's confirmation of C02.

12. Selected W-series writer handoff

There's no writer handoff, and drafting can't begin.
